

Replication Instructions for “Would Eliminating Racial Disparities in Motor Vehicle Searches Have Efficiency Costs?”

Benjamin Feigenberg (bfeigenb@uic.edu)
Conrad Miller (ccmiller@berkeley.edu)

Overview

This README file is divided into two parts. In the first part of the README file, we describe the structure and contents of the replication folder and we provide instructions for replicating the paper’s analyses. We also identify the subset of datasets that include personally identifiable information (PII) and cannot be publicly posted. The second part of the README file provides instructions for accessing these datasets with specific references to the programs that call in each confidential data file.

Part 1: Replication Folder Contents

This folder contains the Stata do-files (in the **code** sub-folder) that generate the tables and figures from the paper. In the **data** sub-folder, we include one folder (**data/raw**) that contains data files that can be publicly posted. We also include a folder (**data/raw_notincluded**) that serves as a placeholder for those data files that cannot be publicly posted. The **data/intermediate** folder contains intermediate data files produced by the included programs. Tables and figures are stored in the **output** sub-folder. The **logs** sub-folder stores the log files produced by the do-files.

Hardware Requirements

This code was last run on a 6-Core Intel-based laptop with Mac OS 10.15.7.

Software Requirements

All included analyses were conducted in Stata 16.

Data

List of datasets included (data/raw):

File	Description
Names_2010Census.dta	File from U.S. Census Bureau with racial and ethnic distributions associated with surnames appearing in the 2010 Census
income.dta	Constructed file that maps each stop to the median household income for the Census Block Group corresponding to the motorist’s address
zip_demographics_2011.dta	Median household income by zip code from the 2011 American Community Survey

stops_all_loc.dta	Constructed file that maps each geocoded stop to a sergeant patrol area (mapping constructed in ArcGIS)
intersections.dta	Constructed file of intersections between sergeant area borders and highways (constructed in ArcGIS). Used in RD exercise.
driving_distances.dta	Constructed file of driving distances between stop locations and nearby intersections (constructed in ArcGIS). Used in RD exercise.
trooper_demographics.dta	File with trooper demographic characteristics
countypres_2000-2016.csv	File with county-level data on vote counts by presidential candidate in the 2016 presidential election
maps/THP_SGTArea_outlines_20200422	Sergeant area boundaries shapefile
maps/TxDOT_Roadways	Texas roadways shapefile
shp2longlat.dta	Constructed manually in ArcGIS to harmonize coordinate systems across shapefiles

List of datasets not included (data/raw_notincluded):

File	Description
/TX_original/csv/	Folder with raw stops data obtained from Stanford Open Policing Project
final_ids.dta	This file maps stops to constructed ID for each motorist. Constructed using proprietary Infutor data on address histories and restricted access criminal history data.
arrest_hist.dta	Criminal history for each motorist constructed using restricted access criminal history data.
arrests.dta	Maps stops to arrests (where applicable) using restricted access criminal history data.

Programs

The file `master.do` is the master file that sets the directory structure, describes the function and output of each component do-file, and calls in each do-file sequentially. Note that the do-files called in by `master.do` are located in the **code** sub-folder. These do-files cannot be run without first obtaining access to the subset of data files with personally identifiable information that are listed above and described in more detail in Part 2 of this README file.

A set of globals are declared at the start of `master.do`. You will need to change the global **basedir** to correspond to the location of your replication folder. In addition, after acquiring the subset of data files that are not posted in the repository, the corresponding global **sensdir** will need to be changed. Below, we list the program that generates each table/figure as well as the names of the relevant output files produced. We also list those additional programs referenced in `master.do` but not included in “List of Tables and Figures.”

List of Tables and Figures

Table/Figure #	Program	Output File
Table 1	3-desc_analysis.do	desc_stats.tex
Table 2	6-spc_pool.do	selection_models.tex
Table 3	10-wm_design.do	Produced inline in log file
Table 4	12-bt_counterfactuals.do	Produced inline in log file
Table 5	13-wt_design.do	Produced inline in log file
Table 6	14-wt_counterfactuals.do	Produced inline in log file
Figure 3	9-spc_figures.do	spc_pool.pdf

List of Additional Programs (not included above in List of Tables and Figures)

Program	Description
1-stop_construct.do	This program uses the raw stops data from /TX_original/csv/ to construct the stops_all.dta data file
4-calc_stop_rates.do	This program uses stops_all.dta to construct the trp_stop_rates.dta data file that provides stop rates at the officer by location by time level
5-speed_patterns.do	This program uses stops_working.dta to construct the trp_speeds.dta data file that provides cited speeds at the officer by location level and to produce related summary statistics
7-spc_pool_night.do	This program uses stops_working.dta to construct the np_rates_pool_night.dta data file that is used to estimate the between-trooper search productivity curve for night stops

Part 2: Accessing Data Files That Cannot Be Publicly Posted

Administrative data on Texas Highway Patrol stops can be obtained from the Stanford Open Policing Project (openpolicing.stanford.edu). We use the raw data that the Stanford Open Policing Project received from the Texas Department of Public Safety as part of a FOIA request. The raw data include motorist identifying information, including full name and address. These data can be requested by contacting open-policing@lists.stanford.edu. These data correspond to the /TX_original/csv/ files listed under *List of datasets not included* and used in program 1-stop_construct.do to construct the stops_all.dta data file. Pre-processed data with harmonized variable names are publicly posted by the Stanford Open Policing Project at <https://openpolicing.stanford.edu/data/>. These data are missing motorist identifying information needed to construct a number of the variables required to run the programs described above.

Administrative data from the Texas Computerized Criminal History System were obtained from the Texas Department of Public Safety under Texas Government Code 411.083(b)(4). Requests for data access can be directed to OGC.Webmaster@dps.texas.gov. These data are used to construct the arrest_hist.dta and arrests.dta data files listed under *List of datasets not included* and used in program 2-create_working.do to construct the stops_working.dta data file. These data are also used in conjunction with proprietary Infutor data on address histories to construct the final_ids.dta data file listed under *List of datasets not included* and used in program 2-create_working.do.
